

Campus safety, in proportion.

Reported campus offenses by geography and documented population. Offense-source audit dated 25 September 2026; resident-source follow-up dated 26 September 2026. Original federal results remain available as an explicit archive.

Scope and principal interpretation

The fixed cohort includes **42 institutions**: the ten University of California (UC) institutions, eight Ivy League institutions and 24 other public/private universities including San Diego State University (SDSU). Current table extraction covers **42 institutions**, with verification limits stated for each. Four calendar years, 2022-2025, are available in the interface; coverage differs by edition and branch. [10-12]

The default compares 2024 campus-housing reports per 1,000 documented residents. **14 combined criminal-offense rates are available among 14 institutions with resident counts**. These populations are dated snapshots with qualified geographic scope. 2 populations are adopted for 2025, but no complete matching combined institutional rate is available. Missing rates do not imply no reports. These administrative ratios are not convictions, unique-victim counts or student victimization probabilities. [3,5,10,13]

SDSU rape reports: why 2024 has both one and three

Report year	Housing subset	Campus total	Noncampus	Public	Combined
2023	8	11	2	0	13
2024	1	1	2	0	3
2025	10	11	5	0	16

Housing is already included in campus total. For 2024, **1 campus + 2 noncampus + 0 public = 3**. The earlier count of one describes housing/on-campus geography. Both report editions agree on those 2024 values; this discrepancy is geographic, not a revision. The 2026 edition does revise 2023 housing rape from seven to eight. [1,2]

The email-only 2026 count is excluded: no reporting cutoff and aligned scope have been established. A report titled 2026 does not establish complete 2026 calendar data. The currently linked file name contains "newdraft"; this study records the listing and exact file hash without asserting final certification. [1,10]

Population and rate calculations

An annual report edition is a publication version. Calendar report year identifies when an offense was reported to a campus security authority or local police, not necessarily when it occurred. Reports can involve nonstudents. [5]

Annual descriptive ratio

$$R_{it} = k \frac{C_{it}}{N_{it}}$$

C_{it} is the selected count for institution i , year t ; N_{it} is that year's documented population. The scale k is 1,000, or 10,000 when selected online. Counts and denominators accompany every rate. [3,6a,11,13]

Pooled 2022-2024 annual ratio

$$R_{i, \text{pooled}} = k \frac{\sum_{t=2022}^{2024} C_{it}}{\sum_{t=2022}^{2024} N_{it}}$$

Sum the three counts and divide by the sum of the three dated population snapshots. This is a denominator-weighted mean, not an unweighted average and not unique people across three years. Calculations retain full precision until display; any unavailable component withholds the result.

Population alignment

Housing populations combine the State Auditor's actual fall occupancy and university housing census counts. These are dated fall/autumn snapshots and approximate institutional housing denominators: properties are not matched individually to Clery residential geography. Optional enrollment measures use institution-wide fall headcount, including part-time and distance-only students. Neither denominator measures time physically present. [3,6a,13-18,20,21]

Capacity, rounded estimates and incomplete undergraduate/graduate subsets are retained as research leads, not substituted for actual resident totals. No earlier population is carried forward. A valid population alone does not resolve missing source counts. The original 2022-2024 federal enrollment bytes remain unchanged. [6,10,12,13]

Expanded source and population coverage

The acquisition follow-up increases 2024 combined housing-count availability from 29 to 33 institutions; documented resident populations from 11 to 14; and paired rates from 10 to 14. Current source extraction reaches all 42 institutions, comprising 36,652 source cells. Access and extraction do not establish complete reporting. [10-13]

Initial five resident additions

Institution / period	Residents	Source scope
Stanford, autumn 2024	14,203	7,108 students in undergraduate housing + 7,095 in graduate housing. University-authored factbook recovered from a publisher mirror. [14]
Stanford, autumn 2025	14,042	6,727 students in undergraduate housing + 7,315 in graduate housing. Current official university page. [15]
Carnegie Mellon, fall 2022	3,458	3,158 university housing + 300 fraternity/sorority housing. [16,18]
Carnegie Mellon, fall 2023	3,764	3,515 university housing + 249 fraternity/sorority housing. [17,18]
Carnegie Mellon, fall 2024	3,988	3,732 university housing + 256 fraternity/sorority housing. [17,18]

Stanford university-provided housing is not reconciled to every Clery parcel or overseas branch. The 2024 mirror agrees with the visible university-authored page and indexed official values; identical original bytes could not be authenticated. Carnegie Mellon combines disjoint undergraduate housing categories; its housing office excludes graduate students from on-campus housing. Its table is labeled Pittsburgh, although the 2024 total matches university-wide undergraduate enrollment. These source qualifications remain attached to each population. [13-18]

Texas reports 10,018 residents in spring 2024, but does not explicitly separate students from possible dependents in that figure. This is a documented candidate, not an adopted student denominator. Stanford's 2025 population is adopted, but overseas count coverage does not extend consistently through 2025. A population alone does not repair missing counts. [10,11,13,19]

Recovered and updated crime reports

Original Merced, Harvard, Johns Hopkins and Virginia reports were recovered and independently checked. Harvard still has omitted geographic columns. The Hopkins report is titled 2025, says issued October 1, 2026, and tabulates 2023-2025; it was publicly linked before that printed issue date. Stanford's main-campus report advances to 2026 while overseas editions remain mixed. The latest Princeton report adds 2025; overlapping 2023-2024 values agree with its previous edition. [10-12]

Resident-source follow-up: 26 September

The follow-up verifies five further observations: four Yale housing censuses and one historical Stanford census. Together with the initial five additions, these records extend documented populations without changing any offense counts. [11,13,20,21]

Institution / period	Residents	Source scope
Yale, fall 2022	6,255	5,297 undergraduate + 958 graduate/professional students. [20]
Yale, fall 2023	6,064	5,120 undergraduate + 944 graduate/professional students. [20]
Yale, fall 2024	6,011	5,057 undergraduate + 954 graduate/professional students. [20]
Yale, fall 2025	6,082	5,115 undergraduate + 967 graduate/professional students. [20]
Stanford, autumn 2023	14,137	7,207 students in undergraduate housing + 6,930 in graduate housing; archived original university factbook. [21]

Yale explicitly counts students in university housing. Students residing with partners or dependents are a student classification; those columns do not add family members to the denominator. The source specifies fall of each academic year and records the summer 2024 closure of Helen Hadley Hall. Its housing properties are not independently matched to every Clery residential property. Current Yale offense tables end in 2024, so the 2025 population does not establish a 2025 rate. [11,13,20]

Stanford's complete 2024 factbook was recovered from an archived capture of its official website. The downloaded Portable Document Format (PDF) file's digest matches the archive index, and the housing page was visually checked. This resolves the earlier indexed-only source limitation for autumn 2023. The university-provided housing footprint retains the same geographic qualification as the 2024 and 2025 observations. [13,21]

Documented evidence beyond adopted totals

Partial populations, approximate figures and unresolved population definitions remain useful context. They are retained in a separate evidence ledger and do not enter the exact resident denominators. A missing adopted denominator means that this study has not verified a compatible total; it does not establish that no housing figure is publicly available. [13,22]

Resident evidence and outstanding qualifications

Housing comparison and updated results

2024 institutional residential-facility counts divided by documented residents. All 14 institutions with an adopted population remain visible when a selected count is unavailable. Ratios are approximate geographic normalizations, not resident victimization rates. [3,10,11,13]

Institution	Residents	Criminal offenses	Per 1,000	Rape offenses	Per 1,000
Carnegie Mellon	3,988	4	1.00	2	0.50
San Diego State	8,367	7	0.84	1	0.12
Stanford	14,203	63	4.44	20	1.41
UC Berkeley	10,862	55	5.06	20	1.84
UC Davis	15,024	115	7.65	9	0.60
UC Irvine	17,695	29	1.64	15	0.85
UC Merced	4,077	14	3.43	6	1.47
UC Riverside	8,465	29	3.43	5	0.59
UC San Diego	21,907	52	2.37	20	0.91
UC San Francisco	832	7	8.41	1	1.20
UC Santa Barbara	10,286	71	6.90	32	3.11
UC Santa Cruz	8,888	58	6.53	38	4.28
UC Los Angeles	24,202	53	2.19	10	0.41
Yale	6,011	56	9.32	11	1.83

Housing rape reports by year and source edition

Period	UC San Diego count / residents	Per 1,000	SDSU main count / residents	Per 1,000
2022	12 / 17,906	0.67	9 / 7,919	1.14
2023	11 / 18,906	0.58	8 / 8,100	0.99
2024	20 / 21,907	0.91	1 / 8,367	0.12
2022-24 pooled	43 / 58,719	0.73	18 / 24,386	0.74

SDSU 2022 uses its 2025 report; 2023-2024 use its current 2026 report. The revised 2023 housing count raises the pooled numerator from 17 to 18 and the ratio from 0.70 to 0.74. UC San Diego remains 43 / 58,719 = 0.73. Similar pooled ratios do not establish equivalent underlying safety. [1-4]

Geography, revisions and source conflicts

The geographic explorer separates campus housing, other campus locations, campus total, noncampus property and qualifying public property. Campus housing is a subset, not a fourth additive area. Ordinary off-campus community crime remains outside these reporting boundaries. [5]

Source issue	Treatment in this revision
Historical revisions	Use the named current source cell; preserve older federal and institutional versions. Do not attribute a difference to a cause unless a source explains it.
UC Davis / Santa Cruz corrections	Retain revised count cells and their footnotes. Repeated incidents disclosed in one report remain offenses, not inferred unique victims.
Combined domestic/dating categories	Withhold separate-category comparisons where the source combines categories. Printed zero does not establish no dating-related violence.
Conflicting years or totals	Retain raw cells and source locators. Withhold ambiguous cells; retain an unambiguous geographic subset only with documented source evidence.
Missing geographic columns	Unknown is not zero. Only explicit absent-geography declarations support structural zero contributions to a total.
New or changed branches	Keep source-specific branch identities and opening/scope notes. Do not silently allocate an institution-wide population to a branch.
Unusable outside-agency returns	Florida Everglades and Vicenza 2025 lack usable local-agency data; affected comparisons are withheld.
Recovered sources	Merced, Harvard, Johns Hopkins and Virginia PDF reports are now verified. Omitted columns, incomplete outside-agency returns and source conflicts still limit calculations.

Detailed qualifications and every exclusion are recorded in the institutional inventory and cell ledger. The original federal snapshot remains available for reproducibility; it is not presented as the newest institutional account. Missing and withheld values must not be used to rank institutions. [10-12]

Institutional source inventory (1/3)

Official annual-report links are clickable. Source editions can differ among branches. Data years are the years actually extracted, not an assertion of complete institutional coverage. Exact hashes, Coordinated Universal Time (UTC) retrieval times and exclusions appear in the online ledger. [10,11]

Institution / official report	Edition	Extracted years	Verification
Brown University	2025	2022, 2023, 2024	Extracted; source exclusions apply
California Institute of Technology	2025	2022, 2023, 2024	Extracted; source exclusions apply
Carnegie Mellon University	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of Chicago	2026	2023, 2024, 2025	Extracted; source exclusions apply
Columbia University in the City of New York	2025	2022, 2023, 2024	Extracted; source exclusions apply
Cornell University	2026	2023, 2024, 2025	Extracted; source exclusions apply
Dartmouth College	2025	2022, 2023, 2024	Extracted; source exclusions apply
Duke University	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of Florida	2026	2023, 2024, 2025	Extracted; source exclusions apply
Georgetown University	2026	2023, 2024, 2025	Extracted; source exclusions apply
Georgia Institute of Technology-Main Campus	2026	2023, 2024, 2025	Extracted; source exclusions apply
Harvard University	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of Illinois Urbana-Champaign	2025	2022, 2023, 2024	Extracted; source exclusions apply
Johns Hopkins University	2025	2023, 2024, 2025	Extracted; source exclusions apply

A dated resident population does not establish a complete corresponding offense numerator. Report access is not proof of complete reporting; sources may change after the recorded audit cutoff.

Institutional source inventory (2/3)

Official annual-report links are clickable. Source editions can differ among branches. Data years are the years actually extracted, not an assertion of complete institutional coverage. Exact hashes, Coordinated Universal Time (UTC) retrieval times and exclusions appear in the online ledger. [10,11]

Institution / official report	Edition	Extracted years	Verification
University of Michigan-Ann Arbor	2025	2021, 2022, 2023, 2024	Extracted; source exclusions apply
Massachusetts Institute of Technology	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of North Carolina at Chapel Hill	2026	2023, 2024, 2025	Extracted; source exclusions apply
Northwestern University	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of Notre Dame	2025	2022, 2023, 2024	Extracted; source exclusions apply
New York University	2025	2022, 2023, 2024	Extracted; source exclusions apply
Ohio State University-Main Campus	2025	2022, 2023, 2024	Extracted; source exclusions apply
Pennsylvania State University-Main Campus	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of Pennsylvania	2026	2023, 2024, 2025	Extracted; source exclusions apply
Princeton University	2025, 2026	2022, 2023, 2024, 2025	Extracted; source exclusions apply
San Diego State University	2025, 2026	2022, 2023, 2024, 2025	Extracted; source exclusions apply
Stanford University	2025, 2026	2022, 2023, 2024, 2025	Extracted; source exclusions apply
The University of Texas at Austin	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of California-Berkeley	2025, 2026	2022, 2023, 2024, 2025	Extracted; source exclusions apply

A dated resident population does not establish a complete corresponding offense numerator. Report access is not proof of complete reporting; sources may change after the recorded audit cutoff.

Institutional source inventory (3/3)

Official annual-report links are clickable. Source editions can differ among branches. Data years are the years actually extracted, not an assertion of complete institutional coverage. Exact hashes, Coordinated Universal Time (UTC) retrieval times and exclusions appear in the online ledger. [10,11]

Institution / official report	Edition	Extracted years	Verification
University of California-Davis	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of California-Irvine	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of California-Merced	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of California-Riverside	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of California-San Diego	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of California-San Francisco	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of California-Santa Barbara	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of California-Santa Cruz	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of California-Los Angeles	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of Southern California	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of Virginia-Main Campus	2026	2023, 2024, 2025	Extracted; source exclusions apply
University of Washington-Seattle Campus	2025	2022, 2023, 2024	Extracted; source exclusions apply
University of Wisconsin-Madison	2025	2022, 2023, 2024	Extracted; source exclusions apply
Yale University	2025	2022, 2023, 2024	Extracted; source exclusions apply

A dated resident population does not establish a complete corresponding offense numerator. Report access is not proof of complete reporting; sources may change after the recorded audit cutoff.

Interpretation, related research and verification

Administrative reporting is not prevalence

Higher recorded rates can reflect offending, disclosure, property boundaries, record conventions or a combination. A small or zero count does not establish absence of victimization. This purposive cohort is not a representative national sample; no safest-campus ranking, causal estimate or significance test is supplied.

Comparisons with related research

The National Center for Education Statistics (NCES) normalizes national campus counts by full-time-equivalent enrollment, per 10,000 students. This study uses enrolled headcount or documented residents. Changing the numerical scale does not reconcile those denominators. [8]

The Bureau of Justice Statistics Campus Climate Survey Validation Study compares survey and Clery measures across nine pilot campuses. Survey recall periods, populations and disclosures differ from administrative reports. Alignment matters before comparing them; neither source supplies a universal underreporting adjustment. The original targeted research review remains available and is not relabeled as a new systematic review. [9,12]

Audit structure

Source checks record exact downloaded versions, table headers, geography, raw tokens and footnotes. Alternate extraction engines and independent calculation reviews check category mappings, missingness, sums, population joins and rate calculations. The recovered Virginia PDF agrees with all 1,008 previously transcribed core cells; its visual verification is now complete. The source and citation audit is separate from formula/layout verification. [10-12]

The public package preserves source-derived aggregate cells, dated inventory, normalization decisions, calculations and replay code. It does not include individual victim records. Source re-extraction requires the exact original reports, identified by web address and hash where retrieved; a mutable web address alone does not identify a fixed version.

Material limitations

Reporting completeness is unknown. Housing properties are not fully matched to population boundaries; dated snapshots are not person-time; nonstudents may be included; multiple offenses can be disclosed together; branches and source editions differ. Most institutions lack adopted resident populations, especially for 2025. The federal and institutional series remain separate selectable sources, not interchangeable estimates. [10,11,13]

These checks are computational and source-verification audits. They are not external human peer review or agency certification. Publication states what was verified and leaves unresolved values unavailable. [12]
